

The Family Asteraceae of Rajshahi Division, Bangladesh: Taxonomic Investigation of Asteraceae

Taxonomic investigation of the family Asteraceae (Compositae) growing throughout the Rajshahi Division situated in the northern part of Bangladesh was carried out. A total of 36 species under 29 genera of the family Asteraceae were collected and identified. Of the total number of species, 8 were found under cultivation and 28 grow wild in the study area. *Ageratum conyzoides*, *Blumea lacera*, *Eclipta alba*, *Tridax procumbens*, *Vernonia patula* and *Xanthium indicum* were recorded as densely populated and *Mikania cordata* as the only climbing species. *Blumea laciniata* and *Wedelia trilobata* have been reported here for the first time from Rajshahi Division, and *Perthenium hysterophorus* as a new record from Bangladesh. Of the total number of species in the study area, 97.22% were recorded in Rajshahi district; 77.77% in Natore district; 75% in Nawabgonj district; 61.11% in Naogaon district; 72.22% in Bogra district and 66.66% in Joypurhat district. Finally, a new system of classification of the family Asteraceae has been proposed on the basis of morphological, anatomical and floral characters.
